

EP-M1250

Nine Laser Large Format
Metal Additive Manufacturing System

EP-M1250

Using MPBF (Metal Powder Bed Fusion) technology, the EP-M1250 is using a $1258 \times 1258 \times 1350 \text{ mm}^3$ build envelope and nine laser systems to ensure a high efficiency production. The precise positioning and innovative area splicing control technology offers uniformity and stability throughout the whole printing phase.

The system can operate with various metal powders such as Titanium, Aluminum and Nickel-based alloys, Maraging Steel, Stainless Steel, Chrome Cobalt Alloys and other materials. It is suitable for the direct manufacturing of large-size, high-precision and high-performance parts in the aerospace, aviation, automotive and machinery industry.

» Reliable & Stable

- Tightly sealed build chamber maintains oxygen concentration $< 100 \text{ ppm}$ and a stable pressure during printing.
- Environment and gas source state real-time monitoring, safe and reliable.

« High Efficiency & Productivity

- Printing of mass-individualized parts in the 2136 Liter ($1258 \times 1258 \times 1350 \text{ mm}^3$) build chamber.
- Each of the nine lasers covers its own area for maximum efficiency.
- Bi-directional powder re-coating method leads to reduced re-coating time.

» High Quality

- Excellent high beam quality ($M2 \leq 1.1$).
- Printed parts' density > 99.9 %, deviation in parts' mechanical properties < 5 %.
- The optimized gas flow design ensures efficient removal of smoke and splashes as well as achievement of uniform and consistent full size printing.
- The strict calibration ensures the consistency between parts and batches.

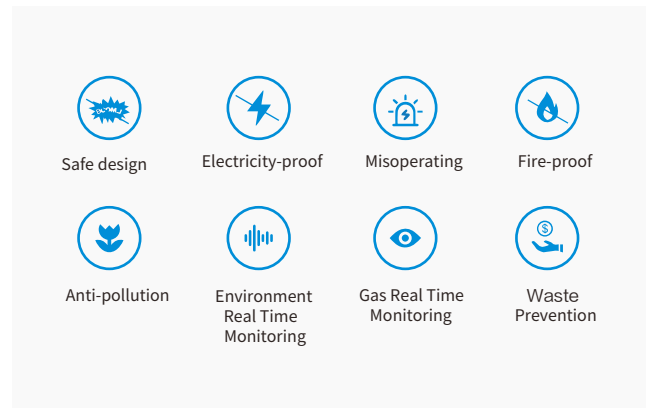

« Easy Operation

- Friendly user interface with fully automatic one-click printing function.
- Two-stage filtration, which can use blow back function to remove the fume, equipped with permanent filter element.
- The build job information is displayed in real time with traceable printing parameters report.

» Perfect After-sales Service

- We support our customers with technical consulting services, including data evaluation, application development.
- Assisting our customers in new material parameter development, existing parameter packages are provided free of charge.
- Free equipment installation and maintenance during warranty period, full set of technical training is provided.

EP-M1250

PARAMETER

Machine Model	EP-M1250
Build Volume (XxYxZ)	1258×1258×1350 mm ³
Optical System	Fiber Laser 9*500 W / 700 W / 1000 W
Spot Size	80-120 μm
Max Scan Speed	7 m/s
Layer Thickness	20-120 μm
Max Building Speed	240 cm ³ /h
Material	Titanium Alloy, Aluminium Alloy, Nickel Alloy, Maraging Steel, Stainless Steel, Cobalt Chrome, Copper Alloy, etc.
Substrate heating	Substrate heating temperature 200 °C
Power Supply	380 V, 100 A, 40 kW, 50/60 Hz
Gas Supply	Ar/N ₂
Forming chamber oxygen content	≤100 ppm
Dimension (WxDxH)	9000 x 4800 x 6300 mm ³
Weight	50000 kg
Software	EP-Hatch , EP Control
Input Data Format	STL file or other convertible format

Notice: Eplus3D reserves the right to explain any alteration of the specifications and pictures.
